

CHIYODA SINGAPORE

"Harmony Between Energy and the Environment"

Chiyoda's mission is to be a global leader in the drive towards a low-carbon future by engineering for sustainable industrial progress.

We are proud of our track record as an innovator in energy-related technologies.

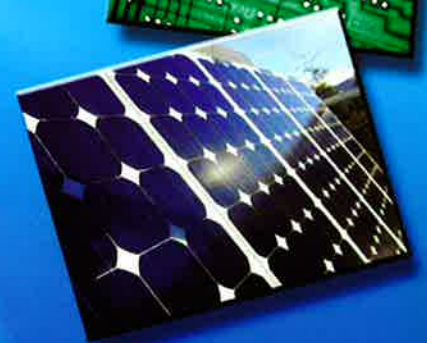

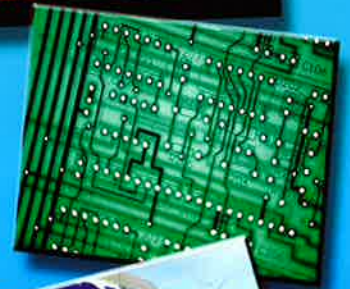

Today the company is consolidating its core LNG/Gas business and stepping up efforts in photovoltaic and solar heat generation, coal gasification and carbon management.

Deep technical competence and a corporate culture in which initiative and innovation thrive are underpinned by a genuine commitment to best practice in health and safety, quality and environmental management.

Chiyoda Singapore offers a broad spectrum of engineering and construction services. Feasibility studies, design, procurement, construction and maintenance are all within our remit.

A versatile and flexible organizational structure enables Chiyoda to tackle a wide variety of projects (anything from individual process units through to turn-key solutions for major facilities) while a collaborative approach to project management brings the best out of our people and delivers the best result for our customers.

Because Chiyoda has such a broad technical base and works in so many fields – petroleum and petrochemical, pharmaceutical, power generation, pipelines (onshore and offshore), airport fuel supply systems, waste water treatment and LPG to name just a few – we are seeking individuals with a range of different skill-sets.
